

# Design-Partner Target List — Scoring Template

Qualification gates, weighted scoring rubric, and working list template for the 25-account design-partner pipeline.

## Purpose

Select 5 design partners from a scored pool of ~25 candidate accounts. Partners receive a 6-month free partnership; in return we get weekly feedback, assumption validation, and (on conversion) a citable case study. The single success metric per partner: a Siliconomics Build is cited in a real gate review or board deck.

## Qualification Gates (all four required — score only accounts that pass)

- G1 — Active decision: a real silicon program decision (node, topology, packaging, make/buy) lands within the next 2 quarters.
- G2 — Executive sponsor: a VP-level sponsor commits to one review session per month.
- G3 — Validation willingness: agrees to compare Siliconomics outputs against internal numbers (without sharing NDA data with us).
- G4 — Competitive isolation: not a direct competitor of an already-signed partner.

## Scoring Rubric (weighted, 0–2 per criterion)

| Criterion               | Wt  | Score 0                | Score 1                    | Score 2                              |
|-------------------------|-----|------------------------|----------------------------|--------------------------------------|
| Decision imminence      | 25% | No decision in 12 mo   | Decision in 2–4 quarters   | Decision this or next quarter        |
| Exec sponsor access     | 20% | No warm path to VP+    | Intro possible via network | Direct relationship with sponsor     |
| Segment fit (see tiers) | 20% | Outside ICP            | Tier 2–3 fit               | Tier 1: first-silicon system company |
| Feedback capacity       | 15% | No bandwidth           | Ad-hoc responses only      | Weekly 30-min committed              |
| Reference value         | 10% | Cannot be named        | Private reference only     | Public logo + case study likely      |
| Competitive isolation   | 10% | Conflicts with partner | Adjacent overlap           | Clean                                |

## Interpretation

- Weighted score  $\geq 1.60$  — pursue immediately (target: top 8 accounts).
- 1.20 – 1.59 — nurture; re-score monthly as programs mature.
- $< 1.20$  — park; revisit next quarter.

## Segment Guidance

| Tier   | Profile                                                                                                                    | Entry persona                | Why they buy                                                                                    |
|--------|----------------------------------------------------------------------------------------------------------------------------|------------------------------|-------------------------------------------------------------------------------------------------|
| Tier 1 | First-silicon system companies: AI hardware startups, hyperscaler-adjacent silicon teams, automotive OEM silicon divisions | VP Silicon / Chief Architect | Making the chiplet-vs-monolithic / node / packaging call now, without institutional cost models |
| Tier 2 | Tier-2 fabless and chiplet-era SMEs                                                                                        | Program Director / CFO       | Have spreadsheets, lack auditability; need board-credible program reviews                       |

|        |                                                                      |                           |                                                   |
|--------|----------------------------------------------------------------------|---------------------------|---------------------------------------------------|
| Tier 3 | Silicon design-services firms; deep-tech VCs doing silicon diligence | Engagement lead / Partner | One license, many engagements; loudest references |
|--------|----------------------------------------------------------------------|---------------------------|---------------------------------------------------|

*Not targets for v1: top-10 fabless (internal models, 18-month procurement), foundries (data-neutrality conflict), academia.*

## Sourcing Pools

- Founder network and investor intros (highest conversion — start here).
- Chiplet Summit, OCP Summit, DAC corridor conversations.
- LinkedIn silicon-economics community engagement (via teardown posts).
- Inbound from demo mode + published teardowns (tag source in the worksheet).

## Working List (duplicate this sheet as needed — 10 rows per page)

| #   | Company / Contact | Tier | Gates G1–G4 (Y/N) | Weighted score | Next action / owner / date |
|-----|-------------------|------|-------------------|----------------|----------------------------|
| 1.  |                   |      |                   |                |                            |
| 2.  |                   |      |                   |                |                            |
| 3.  |                   |      |                   |                |                            |
| 4.  |                   |      |                   |                |                            |
| 5.  |                   |      |                   |                |                            |
| 6.  |                   |      |                   |                |                            |
| 7.  |                   |      |                   |                |                            |
| 8.  |                   |      |                   |                |                            |
| 9.  |                   |      |                   |                |                            |
| 10. |                   |      |                   |                |                            |

## Cadence

- Score weekly; hold a 30-minute pipeline review every Friday.
- Target: 25 scored accounts, 8 active conversations, 5 signed partners by end of Q+1.
